# How to Use This Workbook

This workbook is designed to be worked through, not simply read. Each module builds on the one before it, taking you from foundational knowledge to practical action. Here is how to get the most from it:

## Your Workbook at a Glance

**Read** — Each section begins with clear, jargon-free explanations.

**Reflect** — Pause at the Reflection Questions and write your honest answers.

**Act** — Complete the Action Steps and checklists before moving to the next module.

**Track** — Use the Bonus Trackers at the back to build lasting habits.

**Share** — Discuss what you learn with a friend, family member, or study group.

You do not need to be a finance expert to use this workbook. If you have a phone and you earn, spend, or save money — this is for you.

*Tip: Keep a pen or highlighter nearby. Workbooks are meant to be written in!*

# Introduction

## Why Digital Financial Literacy Matters Now More Than Ever

Across Africa, money is going digital faster than most people are being educated about it. Mobile money platforms like M-Pesa, Airtel Money, and MTN MoMo have transformed how millions of people transact, save, and send money. New fintech apps promise easier investing, instant loans, and seamless payments. And yet, alongside this revolution, there is a silent crisis: millions of young people and families are losing money to fraud, making poor financial decisions, and feeling overwhelmed by digital financial systems they were never taught to navigate.

Digi-Fin Literacy Africa was born from a simple but urgent conviction: that every African — regardless of age, education level, or income — deserves to understand how their digital money works, how to protect it, and how to grow it.

This workbook is not a theoretical textbook. It is a practical companion — grounded in the real experiences of young Kenyans and Africans who use their phones as their wallets, who have been targeted by scammers, who have felt the shame of falling for fraud, or who simply want to do more with their money than pay bills and survive until the next payday.

### What This Workbook Will Help You Do

Understand the 8 core dimensions of digital financial literacy.

Discover your Digital Money Identity and how to improve it.

Identify the unconscious money beliefs driving your financial decisions.

Learn how to protect your data, privacy, and accounts from digital threats.

Decode the most common digital fraud schemes targeting Africans today.

Build a personalised Digital Financial Action Plan.

Each module in this workbook addresses a real, pressing challenge. Each one ends with reflection questions, action steps, and checklists so that what you learn today becomes a habit tomorrow.

Let's begin.

## MODULE 1

# The 8 Dimensions of Digital Financial Literacy

Most people think financial literacy is simply about budgeting or saving. But in today's digital world, true financial literacy is multi-dimensional. It involves knowledge, skill, behaviour, protection, and access. Digi-Fin Literacy Africa has identified 8 core dimensions that together make up a complete picture of digital financial literacy.

### Learning Objectives

Understand what each dimension of digital financial literacy means.

Assess your current strength in each dimension.

Identify which areas need the most attention in your own financial life.

## Dimension 1: Digital Financial Knowledge

Knowledge is the foundation of everything else. Before you can earn, save, protect, or invest your digital money wisely, you need to understand how the system works. Digital financial knowledge covers how digital payment systems operate, the difference between savings, investments, and credit, how interest rates and fees work on digital lending platforms, how to evaluate financial products and services, and how to find reliable information in a world full of misinformation.

In the Kenyan context, this means understanding how platforms like M-Pesa, Fuliza, KCB M-Pesa, and digital investment apps function — their fees, limits, risks, and benefits. It means knowing why Fuliza charges daily interest and understanding what happens when a mobile loan goes into default.

### **Real-Life Story: Brian, 23, Nairobi**

Brian used Fuliza regularly without understanding how its daily interest model worked. After borrowing KSh 3,000 for two months, he discovered he owed KSh 3,900 — a 30% interest charge he had not anticipated. Once he learned how the product was structured, he began using it only in genuine emergencies and cleared balances within 24 hours.

**Key Takeaway:** Understanding the product before you use it saves you from hidden costs.

### **Reflection Questions**

1. What digital financial tools or apps do you currently use? Do you fully understand how they work?
2. Where do you go when you want financial advice online? How do you know if it is reliable?

### **Your Action Steps**

1. List three digital financial tools you use. Research and write down: how they make money, what they charge you, and their terms for disputes.
2. Follow one verified financial literacy account this week (e.g., Digi-Fin Literacy Africa on Instagram).

## **Dimension 2: Digital Financial Risk Control**

Earning money online is only worthwhile if you can keep it safe. Digital financial risk control is about understanding the threats to your money and building the habits and tools to counter them. This includes using strong, unique passwords for financial accounts, enabling two-factor authentication (2FA) on every platform, recognising phishing attempts and social engineering, understanding encryption and secure connections, and knowing how to report fraud quickly and effectively.

Risk control is not just a technical skill — it is a daily discipline. Every time you click a link in an SMS, log into your mobile banking app on public Wi-Fi, or share your OTP with someone claiming to be from customer care, you are making a risk decision.

### **Real-Life Story: Aisha, 26, Mombasa**

Aisha received an SMS appearing to come from Safaricom warning that her M-Pesa account would be suspended unless she verified her PIN immediately via a link. The link looked official. She almost clicked it. She paused, called Safaricom's official line (100), and confirmed it was a phishing attempt. Her account and savings were safe.

**Key Takeaway:** Pause before you click. Always verify through official channels — not through the link itself.

### **Reflection Questions**

1. When did you last update the passwords for your mobile banking and M-Pesa accounts?
2. Do you have 2FA enabled on your financial accounts? If not, what has stopped you?

### **Your Action Steps**

1. Enable 2FA on at least one financial account this week.
2. Change any password you have used for more than six months.
3. Save Safaricom's official fraud line (100) and your bank's fraud line in your phone.

## **Dimension 3: Consumer Rights & Redress**

Many people do not know that they have legal rights as digital financial service users — and scammers rely on this ignorance. Consumer rights in digital finance include the right to clear, honest information about fees and charges before you transact, the right to fair treatment without discrimination, the right to dispute unauthorised or incorrect transactions, the right to data privacy and security, and the right to formal complaint processes and resolutions.

In Kenya, digital financial consumers are protected by the Central Bank of Kenya (CBK), the Communications Authority, and the Consumer Protection Act. If an M-Pesa agent defrauds you, a mobile lender charges undisclosed fees, or your bank processes an unauthorised transaction — you have the right to report and seek redress.

## Where to Report Digital Finance Complaints in Kenya

Central Bank of Kenya (CBK): [consumerprotection@centralbank.go.ke](mailto:consumerprotection@centralbank.go.ke)

Communications Authority: [complaints@ca.go.ke](mailto:complaints@ca.go.ke)

Safaricom Fraud Line: 100 (free call)

Director of Public Prosecutions (for criminal fraud): via police report

Your bank's official customer care or ombudsman service

## Reflection Questions

1. Have you ever been charged incorrectly by a digital financial service and not known how to dispute it?
2. Do you know the official complaint channel for your primary bank or mobile money provider?

## Your Action Steps

1. Look up and save the official complaint contacts for your bank and mobile money provider.
2. Read the terms and conditions of one financial product you use regularly this week.

## Dimension 4: Practical Application of Digital Finance

Knowledge alone is not enough — you must be able to apply it. Practical application is the dimension that bridges theory and real life. It covers competently making and receiving digital payments, opening and managing savings or investment accounts via apps, completing digital loan applications and understanding repayment terms, sending international remittances using digital platforms, and using digital receipts, statements, and records for personal financial management.

For young Africans, this might mean learning how to open a unit trust account via a mobile app, how to set up automatic M-Pesa savings (e.g., using M-Shwari lock savings or Mali), or how to receive client payments securely as a freelancer.

### **Real-Life Story: Grace, 21, University Student in Kisumu**

Grace received her first freelance payment from an international client via Payoneer and then converted it to KES through a local forex agent — losing 8% in conversion fees. After learning about direct M-Pesa international transfer options and Flutterwave's lower-fee alternatives, she reduced her transfer cost to under 3% and kept more of her earnings.

**Key Takeaway:** Knowing your options puts money back in your pocket. Always compare before you transact.

### **Reflection Questions**

1. What digital financial tasks do you still feel unsure or uncomfortable doing? (e.g., investing, sending money internationally, disputing transactions)
2. Is there a digital financial product you have been meaning to explore but have not yet started?

### **Your Action Steps**

1. This week, try one new digital financial task you have not done before (e.g., open a savings account on a mobile app, set up an automatic savings rule).
2. Watch a tutorial or read the guide for a platform you want to use.

## **Dimension 5: Digital Financial Behaviour**

You can know everything about personal finance and still make poor decisions. Behaviour is the bridge between knowledge and outcomes. Digital financial behaviour covers how you actually spend, save, and manage money in digital spaces. Positive digital financial behaviours include tracking your income and expenses regularly (weekly or monthly), avoiding impulsive purchases triggered by social media ads or flash sales, saving consistently before spending (pay yourself first), reviewing your mobile money and bank statements at least once a month, and setting financial goals and reviewing progress regularly.

Negative digital financial behaviours that drain wealth include using Fuliza or mobile credit for unnecessary purchases, ignoring notifications from your bank or M-Pesa, impulse-buying from Instagram, TikTok, or Jumia without budgeting for it, and sending money without confirming the recipient's details.

### **Real-Life Story: Kevin, 25, Young Professional in Nairobi**

Kevin earned a stable salary but found himself broke by the 15th of every month. He started tracking his M-Pesa transactions using a simple spreadsheet and discovered he was spending KSh 7,000 monthly on food delivery apps and late-night online shopping impulse buys — money he had been attributing vaguely to "miscellaneous expenses." Three months after tracking, he reduced that figure to KSh 2,000 and began saving KSh 5,000 monthly toward an emergency fund.

**Key Takeaway:** You cannot manage what you do not measure. Tracking changes everything.

### **Reflection Questions**

1. Have you reviewed your M-Pesa or bank statement in the past month? What did you find?
2. What is the most common impulse purchase you make digitally? How much does it cost you monthly?

### **Your Action Steps**

1. Download and review your last 30 days of M-Pesa or bank transactions this week.
2. Identify your three largest non-essential spending categories and set a monthly limit for each.
3. Set up an automatic savings rule: even KSh 100 a day adds up to KSh 3,000 a month.

## **Dimension 6: Self-Protection**

Self-protection goes beyond understanding risks in theory — it is about actively building a personal shield against digital financial threats. This dimension focuses on your habits and choices as your first line of defence. Self-protection habits include locking your SIM card with a PIN (separate from your phone PIN), never sharing OTPs, PINs, or passwords with anyone — including those claiming to be from your bank or Safaricom, using a strong, unique password for each financial account, regularly auditing which apps have access to your financial data, and knowing what to do within minutes of suspecting fraud.

## Self-Protection Habits Audit

|                          |                                                                              |
|--------------------------|------------------------------------------------------------------------------|
| <input type="checkbox"/> | My SIM card has a separate PIN lock enabled                                  |
| <input type="checkbox"/> | I have never shared my M-Pesa PIN with anyone in the last 30 days            |
| <input type="checkbox"/> | I use a different password for my banking app than for my email/social media |
| <input type="checkbox"/> | I have 2FA enabled on my primary financial accounts                          |
| <input type="checkbox"/> | I know the fraud reporting line for my mobile money provider                 |
| <input type="checkbox"/> | I regularly check which apps have permission to access my financial data     |
| <input type="checkbox"/> | I have backed up my phone's SIM information in case of theft or loss         |

### Reflection Questions

1. How many items on the checklist above can you confidently tick? What is stopping you from completing the rest?
2. Have you ever made yourself vulnerable online without realising it? What happened?

### Your Action Steps

1. Complete every item on the checklist above within 7 days.
2. Review your app permissions on your phone: Settings > Apps > Permissions. Remove any you do not recognise.

## Dimension 7: Digital Financial Decision Making

Every day, you are making dozens of small digital financial decisions — whether to top up airtime now or wait, whether to use Fuliza or save up, whether that investment offer is legitimate. Strong digital financial decision making is about developing a mental framework that helps you make these choices wisely and consistently. Key principles of good digital financial decision-making include aligning spending decisions with your stated financial goals, pausing 24 hours before making any non-essential purchase over a set threshold (e.g., KSh 1,000), comparing at least two or three options before choosing a financial product, asking "Who benefits from this decision?" before committing to any investment or loan, and seeking advice from trusted, verified sources before major financial choices.

### The STOP Framework for Digital Financial Decisions

S — Stop and breathe. Do not decide in the moment.

T — Think: Do I need this, or do I want it right now?

O — Options: Have I compared alternatives?

P — Proceed only if the answer aligns with your financial goals.

### Reflection Questions

1. Think of a recent digital financial decision you regret. What information would have helped you decide differently?
2. What is one financial goal you have set that your current spending habits are working against?

### Your Action Steps

1. Write down your top three financial goals for the next 12 months.
2. Apply the STOP framework to the next three digital purchasing decisions you face.

## Dimension 8: Inclusive Access, Technical Literacy & Numeracy

Digital finance should serve everyone — but it does not always do so equally. This final dimension addresses the structural and personal barriers that prevent people from fully benefiting from digital financial services.

These include technical barriers (not having a smartphone or reliable internet), literacy barriers (difficulty reading financial product terms or using apps), numeracy barriers (struggling with interest calculations, percentages, or budgeting), access barriers (lack of a national ID, formal address, or bank account), and language barriers (financial content available only in English, not Swahili or local languages).

Awareness of these barriers is the first step to addressing them — whether for yourself or for others in your community whom you can support and teach.

### Reflection Questions

1. Which of the barriers above have you personally experienced? Which have people in your family or community faced?
2. How can you use what you learn in this workbook to help one other person in your life become more financially literate?

### Your Action Steps

1. Identify one person in your life who would benefit from digital financial literacy support. Commit to sharing one tip or resource with them this week.
2. If you know someone who struggles with the technical aspects of mobile money or banking, offer to walk them through one task this week.

## MODULE 2

# Know Your Digital Money Identity

Who are you when it comes to money? Before we can change our financial behaviour, we need to understand it. Your Digital Money Identity is a snapshot of your current relationship with money in the digital world — your patterns, habits, instincts, and blind spots.

### Learning Objectives

Identify your primary Digital Money Identity type.

Understand the strengths and risks of your money personality.

Learn practical strategies to upgrade your financial habits.

## Type 1: The Impulse Spender

The Impulse Spender lives in the moment. You are drawn to flash sales, TikTok gadgets, last-minute Jumia offers, and Instagram shopping. There is nothing wrong with treating yourself — but when spending becomes reactive and unplanned, it consistently leaves you broke before month's end.

### Signs You Might Be an Impulse Spender:

- "Buy Now, Think Later" energy — you act first, regret later.
- Frequently broke or short of cash before your next income.
- You rarely check your transaction history.
- Online shopping notifications excite rather than alarm you.
- You have subscriptions you forgot you signed up for.

### Why This Happens:

Digital commerce is specifically designed to trigger impulse buying. Flash sale countdowns, "Only 3 left!" messages, one-click purchasing, and personalised ads based on your browsing history are all engineered to

bypass your rational thinking and tap into your emotional brain. You are not weak — you are being targeted by billion-dollar marketing machines.

### Your Upgrade Strategy:

- Introduce a 24-hour rule: Before any non-essential purchase over KSh 500, wait 24 hours. Most impulses fade.
- Unsubscribe from promotional SMS and email notifications.
- Set a "fun spending" budget monthly and stick to it — once it is gone, it is gone.
- Delete shopping apps from your home screen and bury them in folders.

#### Real-Life Story: Mercy, 22, Campus Student in Nairobi

Mercy was spending approximately KSh 4,500 monthly on impulse Jumia purchases she barely used. She set a monthly "fun" budget of KSh 1,500 and moved the Jumia app off her home screen. Three months later, her impulse spending dropped to under KSh 800 per month — and she had started a KSh 3,000 monthly savings goal.

Key Takeaway: Small friction (making it harder to spend) is one of the most powerful money tools available.

## Type 2: The Silent Saver

The Silent Saver is disciplined and strategic — possibly the most financially healthy of all the identity types. You quietly stash money in different accounts or apps, rarely overspend, and have emergency savings. You are lowkey about your finances and prefer to let the results speak for themselves.

### Signs You Might Be a Silent Saver:

- You use goal-setting apps or M-Pesa Goals/M-Shwari Lock Savings.
- You rarely make unplanned purchases.
- You have at least one dedicated savings account or wallet.
- You find it hard to talk about money with friends or family.

### Your Opportunity Areas:

Your biggest risk as a Silent Saver is that your money may be sitting idle rather than working for you. Savings accounts offer minimal interest. The next step is learning to invest — unit trusts, Treasury Bills, REITs, or digital investment platforms — so your money grows beyond inflation.

### **Your Upgrade Strategy:**

- Research one beginner-friendly investment platform available in your country (e.g., Ndovu, Cytonn App, Mali, or a local unit trust).
- Move at least 20% of your savings into an interest-earning vehicle.
- Consider sharing your financial knowledge — mentorship builds accountability.

## **Type 3: The Cash-Out Quickie**

Every time money lands in your mobile wallet, your first instinct is to withdraw it immediately. You do not trust digital money — and honestly, given how many people have been defrauded, that caution is understandable. But consistently keeping all your money in cash has its own risks: it is easier to spend impulsively, it does not earn interest, and you lose the convenience and safety features of digital finance.

### **Signs You Might Be a Cash-Out Quickie:**

- You withdraw M-Pesa or bank transfers almost immediately after receiving them.
- You feel anxious leaving money in a digital account.
- You are more comfortable with physical cash than digital balances.
- You have limited experience with mobile savings or investment products.

### **Your Upgrade Strategy:**

- Start small and build trust: Keep just KSh 500–1,000 in a mobile savings product like M-Shwari or KCB M-Pesa for 30 days. See what happens.
- Research the platform you use: Understand what protections are in place and how to dispute issues.
- Use two accounts: One for daily transactions (withdraw from) and one long-term savings account you commit not to touch.

## **Type 4: The Digital Hustler**

The Digital Hustler is entrepreneurial and opportunity-driven. You are always looking for ways to earn online — freelancing, selling on Instagram, dropshipping, content creation, or finding the next digital income stream. Your ambition is a tremendous asset. But ambition without financial structure can lead to inconsistent income management and vulnerability to online business scams.

### **Signs You Might Be a Digital Hustler:**

- You have multiple income streams or side hustles.
- You actively look for digital business opportunities.
- You may not track all your income and expenses carefully.
- You sometimes chase opportunities without vetting them fully.

### **Your Upgrade Strategy:**

- Treat your hustle like a business: Track every shilling in and out using even a simple spreadsheet or the Wave app.
- Separate your business and personal money: Open a separate M-Pesa Paybill or Till Number for business transactions.
- Vet every online opportunity carefully: If someone promises high returns for minimal effort, apply the red flag framework in Module 5.
- Build a financial buffer: Inconsistent income means you need a larger emergency fund — aim for 3 months of expenses.

## **Type 5: The Digital Illiterate**

If you are reading this workbook and you identify as the Digital Illiterate, you have already taken the most important step: acknowledging the gap and seeking to close it. This identity type feels overwhelmed by online financial platforms, avoids digital transactions where possible, and may rely heavily on others to manage digital financial tasks. There is no shame here — digital finance was never properly taught in most schools, and it evolves rapidly.

### **Your Upgrade Strategy:**

- Start with one platform only: Choose the one most relevant to your daily life (likely M-Pesa) and learn it completely before adding others.
- Ask for help: Find a friend, family member, or colleague you trust who can walk you through tasks — or join a Digi-Fin Literacy Africa training session.
- Use official tutorials: Safaricom, your bank, and many CBK-licensed platforms have free tutorial videos and helplines.
- Celebrate small wins: Every new digital skill you master is real progress.

### **Which Digital Money Identity Are You?**

After reading all five types, circle the one that resonates most with you.

Then: What is ONE habit from your type's Upgrade Strategy that you will commit to this week?

Write it here: \_\_\_\_\_

Share it with someone who can hold you accountable!

## Reflection Questions

1. Does your Digital Money Identity reflect who you want to be financially, or who you have been by default?
2. What experiences or influences shaped your current money habits?
3. In 12 months, which identity type do you want to embody? What needs to change to get there?

## MODULE 3

# Money Scripts in the Digital Age

Have you ever wondered why you make the same financial mistakes over and over, even when you know better? The answer often lies not in your income or intelligence, but in your money scripts — the unconscious beliefs about money that were formed during your childhood and are now running on autopilot in your financial life.

Money scripts are beliefs like "rich people are greedy," "I don't deserve to have a lot of money," "debt is always bad," or "money is the root of all evil." They are absorbed from parents, relatives, religious teachings, cultural values, and lived experiences — often before the age of ten. And in the digital age, they are now showing up in entirely new ways.

### Learning Objectives

Understand what money scripts are and where they come from.

Identify your dominant digital money script.

Begin the process of rewriting unhelpful money beliefs.

## Script 1: Digital Money Avoidance

### The Core Belief:

"Online money is risky. I'm not tech-savvy enough. Digital platforms are for other people — not for me."

### How It Shows Up Digitally:

- Avoiding mobile banking apps even when they would be more convenient.
- Refusing to use savings platforms like M-Shwari, Mali, or Ndovu.
- Distrusting digital investments even when they are licensed and legitimate.
- Missing out on government financial inclusion programmes (e.g., Hustler Fund, digital SACCO loans).

## Where It Comes From:

This script often develops from witnessing or experiencing digital fraud, hearing stories of people losing money online, or growing up without access to technology. It can also stem from a deeper belief that financial success is not meant for people "like you."

## The Cost of This Script:

In a world where financial services are increasingly digital-first, avoidance means exclusion. Digital platforms often offer lower fees, higher interest rates on savings, faster transactions, and access to credit that traditional banks do not provide.

### Rewriting Script 1

Old belief: "Digital money is too risky for me."

New belief: "Digital financial tools, when used correctly, give me more control, not less."

First step: Identify one digital financial tool that would make your life easier. Spend 30 minutes this week learning how it works from an official source.

## Script 2: Digital Money Worship

### The Core Belief:

"If I just land the next online gig, find the right crypto coin, or discover the right investment, I will finally be rich. Digital money is the fast track to wealth."

### How It Shows Up Digitally:

- Chasing high-risk online investments with promises of extraordinary returns.
- Gambling on sports betting apps as a primary income strategy.
- Jumping from one online side hustle to the next without building sustainable income.
- Falling for pyramid schemes, crypto pump-and-dump schemes, or fake investment platforms.

## Where It Comes From:

This script is fuelled by social media — where people flaunt success and downplay failure, where influencers make extraordinary income look ordinary and accessible, and where "overnight millionaire" narratives dominate financial content. The desire for financial security is legitimate; the belief that a shortcut exists is the problem.

### **The Cost of This Script:**

Money Worshipers often lose significant sums chasing shortcuts. They also fail to develop the genuine financial skills and sustainable habits that create lasting wealth.

#### **Rewriting Script 2**

Old belief: "The right opportunity will make me rich quickly."

New belief: "Consistent habits and disciplined investment build real wealth over time. Shortcuts usually lead backward."

First step: Calculate how much you have spent in the last 12 months on high-risk or speculative opportunities. Compare that to what you could have saved or invested conservatively in the same period.

### **Script 3: Digital Money Status**

#### **The Core Belief:**

"I must look successful online, no matter what it costs. What people see about my lifestyle matters more than what is actually in my account."

#### **How It Shows Up Digitally:**

- Buying trending gadgets, fashion items, or experiences primarily to post about them.
- Paying for subscriptions and services to keep up appearances.
- Lifestyle inflation: spending more as you earn more, never getting ahead.
- Financial anxiety driven by comparison — always feeling like you are not doing enough.

#### **Where It Comes From:**

The digital age has made social comparison unavoidable. Instagram, TikTok, and Twitter are highlight reels — people post their best moments, most expensive purchases, and greatest achievements. Scrolling through these feeds wires the brain to constantly compare your ordinary life with everyone else's curated extraordinary.

### **Real-Life Story: Wanjiru, 24, Young Professional**

Wanjiru earned a respectable salary but was perpetually in debt. She discovered through financial counselling that she was spending 40% of her income on items she associated with the lifestyle of people she followed on Instagram. She had KSh 0 in savings and KSh 80,000 in mobile loan debt. After unfollowing accounts that triggered envy and setting a "social spending" budget, she cleared her debt in 8 months.

**Key Takeaway:** The most expensive purchase most young Africans make is the one they make to impress people online.

### **Rewriting Script 3**

Old belief: "My online image determines my worth."

New belief: "My net worth matters more than my social media image. I build real wealth quietly."

First step: Audit your social media follows. Unfollow accounts that consistently make you feel financially inadequate or trigger impulse spending.

## **Script 4: Digital Money Vigilance (Excessive Distrust)**

### **The Core Belief:**

"I do not trust digital money at all. It is all risky and unsafe. I will stick to cash and avoid digital platforms as much as possible."

### **How It Shows Up Digitally:**

- Avoiding online transactions even when they are safer and more convenient than alternatives.
- Refusing to keep money in mobile savings, even licensed and insured products.
- Sticking exclusively to cash in an increasingly cashless economy.
- Missing out on digital investment returns, digital credit, and fintech opportunities.

### **The Difference Between Vigilance and Avoidance:**

Healthy caution is a financial virtue. Excessive distrust that keeps you excluded from the digital economy is not. The goal is informed trust — engaging with digital financial tools you have researched and understood,

while maintaining appropriate security habits.

### Rewriting Script 4

Old belief: "All digital money is unsafe."

New belief: "I can use digital financial tools safely when I know what to look for and how to protect myself."

First step: Make a list of your three biggest fears about digital money. Then research the factual safeguards (regulatory protections, account insurance, fraud reporting processes) that address each fear.

### My Money Script Reflection Journal

My dominant money script is: \_\_\_\_\_

This belief shows up in my digital financial life when I: \_\_\_\_\_

The cost of this script to me has been: \_\_\_\_\_

The new belief I am committing to is: \_\_\_\_\_

My first action to reinforce this new belief is: \_\_\_\_\_

### Reflection Questions

1. Think back to your childhood: What messages did you receive about money from your family or community? How might those messages be shaping your digital financial behaviour today?
2. Which of the four Digital Money Scripts resonates most strongly with you? Do you see elements of more than one?
3. What would your financial life look like in 5 years if you successfully rewrote your dominant money script?

## MODULE 4

# Digital Privacy: Protecting Your Data in a Connected World

Your smartphone is not just a communication device. It is your wallet, your diary, your identity document, and your address book — all in one. Every day, it generates enormous amounts of personal data: your location, your contacts, your financial transactions, your browsing habits, your photos, and your conversations. That data has value — and not everyone who wants it has your best interests at heart.

### Learning Objectives

Understand what digital privacy is and why it matters financially.

Identify the most common digital privacy threats in Africa.

Build a practical, sustainable digital privacy protection plan.

## What Is Digital Privacy?

Digital privacy is your right to control how your personal information is collected, stored, shared, and used online. It covers everything from what websites know about your browsing habits to whether your bank can see your transaction patterns to whether a fraudster can access your OTP.

In the financial context, a single breach of your digital privacy can have devastating consequences: your bank account drained overnight, your M-Pesa balance wiped out, your WhatsApp account hijacked to scam your contacts, or your identity used to take out loans in your name.

## **The Data Your Phone Holds Right Now**

Your M-Pesa PIN and transaction history.

Your banking app login credentials.

Your National ID number (in various apps).

Saved passwords (many people use "remember me" on banking sites).

Your physical location at all times (GPS data).

Photos of your documents, receipts, and personal moments.

Your full contact list — including your family, employer, and financial contacts.

Your browsing history, including financial research and shopping habits.

## **Growing Threats to Your Digital Privacy**

### **Phishing**

Phishing involves fraudsters creating fake messages, websites, or emails that appear to come from legitimate organisations (your bank, Safaricom, KRA, M-Pesa) in order to trick you into providing sensitive information such as your PIN, OTP, or password. Phishing messages often create urgency: "Your account will be suspended." "You have won a prize." "Confirm your details now."

### **Social Engineering**

Social engineering is the art of manipulating people into revealing confidential information. Unlike technical hacking, social engineering exploits human psychology — trust, fear, authority, curiosity, and the desire to be helpful. A caller claiming to be from Safaricom customer service who asks you to "verify" your PIN for security purposes is using social engineering.

### **Malware and Data-Harvesting Apps**

Some apps — particularly free apps downloaded outside of official stores — are designed to harvest your personal data, monitor your keystrokes, or grant remote access to your device. They may look like legitimate tools (games, productivity apps, VPNs) while secretly running in the background.

### **SIM Swap Fraud**

SIM swap fraud occurs when a criminal convinces a mobile operator — using your stolen personal information — to transfer your phone number to a new SIM card they control. Once they have your number, they can receive your OTPs, access your mobile banking, and drain your accounts before you even realise what has happened.

#### **Real-Life Story: Daniel, 29, Nairobi**

Daniel received a suspicious call from someone claiming to be a Safaricom agent requesting his ID number to "verify his account." He declined. Two weeks later, a colleague was not so lucky. The fraudster used her ID number (obtained from a social media post where she had shared her ID for a competition) to complete a SIM swap. Within four hours, her M-Pesa and linked bank accounts had been cleared of KSh 43,000.

**Key Takeaway:** Your personal data is a key to your financial life. Guard it with the same care as your PIN.

## **Oversharing on Social Media**

Every piece of personal information you share publicly online — your full name, date of birth, employer, neighbourhood, ID number, phone number, or mother's name — can be used by fraudsters to answer security questions, complete SIM swaps, or craft convincing targeted phishing messages. Even casual posts ("Just got my salary! Treating myself tonight 🍷") can flag you as a target.

## **Principles of Digital Privacy**

### **The 5 Principles of Digital Privacy**

1. **Consent** — You decide who gets your data, not apps or third parties by default.
2. **Minimalism** — Share less than you think you need to. If an app asks for more permissions than it needs, question it.
3. **Transparency** — Know what apps and platforms are doing with your information.
4. **Security** — Use strong authentication: PINs, passwords, biometrics, and 2FA.
5. **Control** — You must be able to take back access: delete accounts, revoke permissions, change passwords.

## **Building Your Digital Privacy Protection Plan**

## Level 1: Immediate Actions (Do This Today)

| Level 1: Do This Today   |                                                                                |
|--------------------------|--------------------------------------------------------------------------------|
| <input type="checkbox"/> | Enable PIN lock on your SIM card (Settings > SIM Card > Lock SIM)              |
| <input type="checkbox"/> | Set up a screen lock on your phone (PIN, fingerprint, or face ID)              |
| <input type="checkbox"/> | Enable two-factor authentication (2FA) on your primary email account           |
| <input type="checkbox"/> | Review your M-Pesa settings — disable SIM Toolkit sharing if you don't need it |
| <input type="checkbox"/> | Change your M-Pesa PIN if you haven't in the last 3 months                     |

## Level 2: This Week

| Level 2: Complete This Week |                                                                                                |
|-----------------------------|------------------------------------------------------------------------------------------------|
| <input type="checkbox"/>    | Review all apps on your phone: Do they need the permissions they have? (Check Settings > Apps) |
| <input type="checkbox"/>    | Enable 2FA on your banking app and email account                                               |
| <input type="checkbox"/>    | Delete apps you no longer use — especially those with financial or contact access              |
| <input type="checkbox"/>    | Turn off location sharing for apps that don't need it                                          |
| <input type="checkbox"/>    | Remove your phone number and ID details from public social media profiles                      |

## Level 3: Ongoing Habits

### Level 3: Ongoing Privacy Habits

|                          |                                                                                          |
|--------------------------|------------------------------------------------------------------------------------------|
| <input type="checkbox"/> | Think before you post: Does this reveal location, income, routines, or identity details? |
| <input type="checkbox"/> | Use unique passwords for each financial platform — a password manager helps              |
| <input type="checkbox"/> | Never use public Wi-Fi for banking, M-Pesa, or financial transactions                    |
| <input type="checkbox"/> | Never share OTPs, PINs, or passwords — even with people claiming to be from your bank    |
| <input type="checkbox"/> | Back up important data securely (not just on your phone)                                 |
| <input type="checkbox"/> | Regularly review account statements for any unauthorised transactions                    |

### Reflection Questions

1. What personal information do you currently have visible on your social media profiles? What could a fraudster do with it?
2. Have you ever received a suspicious call, SMS, or message claiming to be from your bank or mobile provider? How did you respond?
3. On a scale of 1–10, how seriously do you currently take your digital privacy? What would it take to move that to a 9 or 10?

### **Your Action Steps**

1. Complete Level 1 of the Digital Privacy Protection Plan today.
2. Audit your social media profiles: Remove any information that could be used for identity fraud.
3. Download and review the privacy settings on your three most-used apps.

## MODULE 5

# Digital Fraud Decoded: How to Protect Your Money Online

This module is the most urgent in the workbook — because digital fraud is happening right now, every day, to people just like you. In Kenya alone, the Communications Authority has reported that hundreds of millions of shillings are lost annually to mobile money fraud. And the problem is growing as more people use digital financial services.

This module will not just tell you that fraud exists. It will take you inside the mind of scammers, show you exactly how they operate, give you a tested framework for spotting the red flags, and equip you with a full recovery plan if the worst ever happens.

### Learning Objectives

Understand the psychology scammers use to manipulate victims.

Recognise the most common mobile money and digital banking fraud schemes.

Apply a red flag detection framework to real-world scenarios.

Identify and avoid investment scams and Ponzi schemes.

Know exactly what to do if you are defrauded.

Build a personal Digital Safety Vault to prevent future attacks.

## Part 1: The Psychology of Digital Financial Scams

Scams are not primarily about technology — they are about psychology. The most successful fraudsters are not hackers with sophisticated tools. They are skilled manipulators who understand how the human brain makes decisions under pressure, fear, and excitement.

### Cognitive Biases That Scammers Exploit

## **1. Authority Bias**

We are wired to trust authority figures. When someone presents as a senior bank manager, a government official, or a senior Safaricom representative, our brain shifts into compliance mode. Scammers exploit this by using official-sounding language, fake badge numbers, and spoofed phone numbers that appear on your screen as legitimate company lines.

## **2. Scarcity and Urgency**

"This offer expires in 10 minutes." "You must act now or lose your account." Urgency shuts down rational thinking. When the brain senses a scarce opportunity or imminent loss, the prefrontal cortex (responsible for logic and deliberation) partially disengages. You act first and think later — which is exactly what the scammer wants.

## **3. Social Proof**

"Thousands of Kenyans have already joined and are earning daily." Fake testimonials, fabricated screenshots of Mpesa earnings, and invented peer success stories exploit our tendency to look to others for cues about safe behaviour. If it looks like everyone is doing it, the brain assumes it must be safe.

## **4. Reciprocity**

When someone does something for you — even something small — you feel psychologically obligated to return the favour. Scammers exploit this by sending small amounts of money (to "prove" the platform works), giving free gifts, or providing helpful information before making their ask.

## **5. Fear of Missing Out (FOMO)**

"This is a once-in-a-lifetime opportunity." Digital platforms and social media have made FOMO a chronic condition. Investment scams are particularly skilled at leveraging FOMO — making victims feel that if they do not act immediately, they will be left behind while everyone else gets rich.

## The Victim's Mindset: Why "Smart" People Fall for Scams

Falling for a scam is NOT a sign of stupidity. Research consistently shows that victims include educated professionals, financial experts, and people with high emotional intelligence.

Scammers are professionals who have refined their techniques over years. They test different approaches and learn from every interaction.

The shame of being scammed often prevents victims from reporting — which allows scammers to continue and scale their operations.

If you have ever been scammed: it was not your fault. The fraudster is the criminal. You are the victim.

## Deepfakes and AI-Powered Scams

The latest frontier in digital fraud uses artificial intelligence. Deepfake technology now allows fraudsters to create convincing fake video calls, mimic the voice of someone's family member, or create fake images of bank statements and investment returns. If you receive a video call from someone claiming to be a financial advisor or even a family member asking for money urgently — verify through a separate channel before sending anything.

### Reflection Questions

1. Have you ever received a message or call that triggered strong urgency, fear, or excitement? Looking back, were there red flags you missed?
2. Which cognitive bias do you think you are most vulnerable to? How can you build a defence against it?

## Part 2: Mobile Money Fraud — M-Pesa & Banking Apps

### SIM Swap Takeover

The fraudster collects your personal information (from social media, data breaches, or social engineering), then contacts your mobile operator pretending to be you — reporting a "lost SIM" and requesting a replacement. Once they have your number ported to their SIM, every OTP and verification code goes to them. They log into your mobile banking, change the password, and systematically drain your accounts.

## How to Protect Against SIM Swap

Never share your National ID details on social media or with strangers.

Set up a SIM lock PIN with your mobile operator — some operators allow additional security layers.

Enable email notifications for your banking account: SIM swaps cannot intercept email if the fraudster only has your phone number.

Contact your bank immediately if your phone loses signal unexpectedly and you cannot make calls.

Regularly check your mobile operator account for unexpected SIM changes.

## Fake Promotions and Prize Scams

You receive an SMS: "Congratulations! You have won KSh 50,000 in the Safaricom Anniversary Prize. Call 0700XXXXXX to claim." You call. They tell you there is a "processing fee" of KSh 2,000. You pay. Nothing comes. The fraudster pockets your KSh 2,000 and moves to the next victim.

Red flags: You entered no competition. They ask for fees upfront. The number is not an official Safaricom line. They create urgency about claiming within 24 hours.

## Fraudulent Reversals and Refund Scams

A stranger sends you KSh 5,000 "by mistake" via M-Pesa and calls asking you to send it back. You send it back — then discover the original payment was made with a hacked account and is reversed by the bank, leaving you KSh 5,000 out of pocket. Rule: If someone sends you money "by mistake," do not reverse it directly. Contact your mobile operator and let them handle it officially.

## Account Takeover via OTP Interception

This is one of the most common and damaging forms of mobile banking fraud. The fraudster knows your phone number and uses it to trigger a password reset on your banking app. They then call you pretending to be from your bank's security department, saying there is "unusual activity" on your account. In the panic, you read them the OTP. They use it to lock you out and drain your account within minutes.

### **The Golden Rule: Your Bank Will NEVER Ask for Your OTP**

No legitimate bank, mobile operator, or financial institution will ever call you and ask for your OTP, PIN, or full password.

If anyone asks for this information — even someone claiming to be from your bank — hang up immediately.

Call your bank back using the official number on the back of your card or their official website.

## **Part 3: Spotting the Red Flags**

The best defence against fraud is the ability to recognise it before it happens. Here is a comprehensive red flag framework:

### **ALARM Framework — 6 Red Flags That Should Stop You**

A — Asks for sensitive info (OTP, PIN, password, full ID number). STOP.

L — Lures with guaranteed or unrealistic returns. STOP.

A — Acts urgently: "You must decide NOW." STOP.

R — Requests upfront fees before you receive anything. STOP.

M — Mystery contact: unknown sender, unverified profile, anonymous number. STOP.

+ — Too good to be true: If you cannot explain why you specifically were chosen — you weren't.

When in doubt, ask yourself: "Would I be comfortable if my most financially savvy friend could see exactly what I am about to do?" If the answer is no — do not do it.

## **Part 4: Investment Scams & Ponzi Schemes**

Investment scams are among the most financially devastating because they often involve larger sums and target people who are genuinely trying to grow their wealth. Understanding how they work is essential.

### **How a Ponzi Scheme Works**

A Ponzi scheme promises high returns to investors. Early investors receive their promised returns — but these are paid using money from newer investors, not from actual investment activity. The scheme requires a constant flow of new participants to pay existing ones. When new money dries up or the organiser decides to exit, the whole structure collapses — and the majority of investors lose everything.

#### **Real-Life Story: The "Investment Group" That Wiped Out 200 Families**

A WhatsApp investment group in Nairobi promised returns of 30% per month on contributions of KSh 5,000 to KSh 50,000. Early members received their promised returns and recruited friends. Within 8 months, over 200 families had invested — and the organisers disappeared overnight with over KSh 15 million. Police investigations found the group had no actual investment activity.

**Key Takeaway:** If someone promises 30% monthly returns, they are either lying or running a Ponzi scheme. Real investment markets do not work that way.

## Investment Red Flag Checklist

|                          |                                                                           |
|--------------------------|---------------------------------------------------------------------------|
| <input type="checkbox"/> | Promises guaranteed returns with no risk                                  |
| <input type="checkbox"/> | Returns are extraordinarily high (e.g. 20–50% per month or week)          |
| <input type="checkbox"/> | The investment strategy is vague, secret, or "proprietary"                |
| <input type="checkbox"/> | You are encouraged to recruit others in exchange for bonuses              |
| <input type="checkbox"/> | The platform is not registered with CBK, CMA, or relevant regulatory body |
| <input type="checkbox"/> | There are no clear terms for withdrawal or redeeming your investment      |
| <input type="checkbox"/> | Pressure to invest quickly before the "opportunity closes"                |
| <input type="checkbox"/> | Testimonials are anonymous, staged, or consist only of screenshots        |

### How to Vet an Investment Platform

1. Check registration: Is it licensed by the Capital Markets Authority (CMA) or CBK? Visit [cma.or.ke](http://cma.or.ke) or [centralbank.go.ke](http://centralbank.go.ke) to verify.
2. Search the CMA warnings list: They publish known fraudulent platforms regularly.
3. Research independently: Search the platform name + "fraud" or "scam" and read what you find.
4. Talk to someone you trust: A financially literate friend, family member, or advisor.
5. Start small: If you still wish to invest after doing all of the above, start with an amount you can afford to lose entirely.

## Part 5: The Post-Scam Recovery Blueprint

Being defrauded is one of the most distressing experiences a person can have. The shock, shame, self-blame, and financial loss can feel overwhelming. But there are clear, actionable steps that give you the best chance of limiting damage, recovering money, and healing emotionally.

### Phase 1: Immediate Actions (First 30 Minutes)

| Immediate Actions — First 30 Minutes |                                                                                              |
|--------------------------------------|----------------------------------------------------------------------------------------------|
| <input type="checkbox"/>             | Take a breath — panic leads to further mistakes.                                             |
| <input type="checkbox"/>             | Do NOT send any more money, even if they threaten consequences.                              |
| <input type="checkbox"/>             | Call Safaricom on 100 (free) to report the fraud and request a transaction reversal attempt. |
| <input type="checkbox"/>             | Contact your bank's fraud line immediately to freeze any compromised accounts.               |
| <input type="checkbox"/>             | Change all passwords for affected accounts from a different device.                          |
| <input type="checkbox"/>             | Enable 2FA on any accounts where it is not yet active.                                       |
| <input type="checkbox"/>             | Screenshot all messages, call logs, payment confirmations, and any contact details.          |

### Phase 2: Reporting (Within 24–48 Hours)

## Reporting Channels — Kenya

|                          |                                                                                                                        |
|--------------------------|------------------------------------------------------------------------------------------------------------------------|
| <input type="checkbox"/> | File a police report at your nearest police station — get the OB (Occurrence Book) number.                             |
| <input type="checkbox"/> | Report to Safaricom: <a href="mailto:fraud@safaricom.co.ke">fraud@safaricom.co.ke</a> or via the Safaricom app.        |
| <input type="checkbox"/> | Report to your bank's fraud department in writing (email for documentation).                                           |
| <input type="checkbox"/> | Report to the Communications Authority: <a href="mailto:complaints@ca.go.ke">complaints@ca.go.ke</a>                   |
| <input type="checkbox"/> | If investment fraud: Report to the Capital Markets Authority: <a href="mailto:cmainfo@cma.or.ke">cmainfo@cma.or.ke</a> |
| <input type="checkbox"/> | Report to the DCI Cybercrime Unit: <a href="mailto:cybercrime@dcj.go.ke">cybercrime@dcj.go.ke</a>                      |

### Phase 3: Financial Recovery

Financial recovery may take time and is not always guaranteed — but it is possible in some cases. Key steps include filing for a chargeback with your bank if the payment was made via debit card, formally requesting Safaricom's fraud team to attempt a reversal (success depends on timing and whether funds have moved), and contacting the CBK if your bank fails to cooperate: [cbk@centralbank.go.ke](mailto:cbk@centralbank.go.ke).

### Phase 4: Emotional Healing

The emotional impact of fraud is real and significant. Shame is the most common response — and the most damaging, because it prevents victims from reporting, seeking support, and learning from the experience. Speak to someone you trust. Know that fraud is a crime committed against you, not a reflection of your intelligence. If the emotional impact is significant, consider speaking with a counsellor or therapist.

### **You Are Not Alone**

Fraud happens to educated, intelligent, financially aware people every single day.

The fraudster is the criminal. Full stop.

Reporting fraud helps prevent others from becoming victims.

Your experience, once processed, can be a powerful tool to protect your community.

## **Part 6: The Digital Safety Vault — Your Prevention Toolkit**

Your Digital Safety Vault is your complete, personal security system for digital financial life. Build it now — before you need it.

## My Digital Safety Vault — Master Checklist

|                          |                                                                                                     |
|--------------------------|-----------------------------------------------------------------------------------------------------|
| <input type="checkbox"/> | All financial account passwords are unique and strong (12+ characters, letters + numbers + symbols) |
| <input type="checkbox"/> | 2FA is enabled on email, M-Pesa, and all banking apps                                               |
| <input type="checkbox"/> | SIM lock PIN is active on my phone                                                                  |
| <input type="checkbox"/> | Phone has screen lock (PIN, fingerprint, or face recognition)                                       |
| <input type="checkbox"/> | Safaricom fraud line (100) saved in my phone                                                        |
| <input type="checkbox"/> | My bank's official fraud number is saved in my phone                                                |
| <input type="checkbox"/> | I have not shared my OTP, PIN, or passwords with anyone in the past 90 days                         |
| <input type="checkbox"/> | I review my M-Pesa and bank statements at least once per month                                      |
| <input type="checkbox"/> | I only download apps from the official Google Play Store or Apple App Store                         |
| <input type="checkbox"/> | I check app permissions monthly and revoke unnecessary access                                       |
| <input type="checkbox"/> | I avoid using public Wi-Fi for financial transactions                                               |
| <input type="checkbox"/> | I have a backup of important documents stored securely (not just on my phone)                       |
| <input type="checkbox"/> | I know the CMA and CBK complaint channels for investment fraud                                      |
|                          |                                                                                                     |

I have a plan for what to do in the first 30 minutes if I am defrauded

### Reflection Questions

1. How many items on the Master Checklist have you already completed? What is your plan for the rest?
2. Who is one person in your life you can share the ALARM Framework with this week?
3. If you have previously been targeted by a scam (successfully or not), what would have helped you recognise or resist it earlier?

### Your Action Steps

1. Complete the Master Checklist and note a deadline for any unchecked items.
2. Share the ALARM Framework with at least one family member or friend this week.
3. Bookmark the CMA verified platforms list: [cma.or.ke](https://cma.or.ke) — consult it before any new investment.

## Bonus Resources

These bonus tools are designed to support your ongoing digital financial literacy journey. Complete them at your own pace and revisit them regularly as your financial life evolves.

### Bonus 1: 28-Day Digital Financial Habits Tracker

Use this tracker to build one new digital financial habit per week over four weeks. At the end of each day, mark whether you completed the habit. At the end of the week, reflect on what worked and what did not.

#### **Week 1 — Awareness: I will review my M-Pesa and bank statements every evening this week.**

Day 1: ☐ Day 2: ☐ Day 3: ☐ Day 4: ☐ Day 5: ☐ Day 6: ☐ Day 7: ☐

End of week reflection: What did I discover about my spending this week? \_\_\_\_\_

#### **Week 2 — Protection: I will not click any financial link in an SMS or email this week without verifying it through an official channel first.**

Day 1: ☐ Day 2: ☐ Day 3: ☐ Day 4: ☐ Day 5: ☐ Day 6: ☐ Day 7: ☐

End of week reflection: Did I encounter any suspicious messages? How did I handle them? \_\_\_\_\_

#### **Week 3 — Saving: I will save at least KSh 50 per day using a mobile savings product this week.**

Day 1: ☐ Day 2: ☐ Day 3: ☐ Day 4: ☐ Day 5: ☐ Day 6: ☐ Day 7: ☐

End of week reflection: Total saved: KSh \_\_\_\_\_. How did it feel to save consistently? \_\_\_\_\_

**Week 4 — Growth: I will research one legitimate investment option and take one step toward opening an account.**

Day 1: ☐ Day 2: ☐ Day 3: ☐ Day 4: ☐ Day 5: ☐ Day 6: ☐ Day 7: ☐

Investment platform I researched: \_\_\_\_\_

One concrete action I took: \_\_\_\_\_

## Bonus 2: Investment Opportunity Vetting Template

Before committing money to any investment platform, use this template to complete your due diligence.

### Investment Vetting Checklist

Name of platform or investment: \_\_\_\_\_

Promised return rate: \_\_\_\_% per \_\_\_\_ (month/year)

Is this return rate realistic? (Kenyan Treasury Bills offer ~12% per year as a benchmark) YES / NO

Is it registered with the CMA or CBK? YES / NO / CANNOT CONFIRM

Registration number (if yes): \_\_\_\_\_

Did I search CMA's warning list? YES / NO — Was it listed? YES / NO

Can I independently verify how the investment generates returns? YES / NO

Did I speak to someone I trust about this? YES / NO — Their view: \_\_\_\_\_

What is the maximum I can afford to lose entirely without serious harm? KSh \_\_\_\_\_

DECISION: ☐ Invest ☐ Research further ☐ Do not invest

## Bonus 3: My Personal Digital Finance Action Plan

Use this planner to set your financial commitments for the next 90 days based on what you have learned in this workbook.

## My 90-Day Digital Financial Action Plan

Date I am completing this plan: \_\_\_\_\_

MODULE 1 COMMITMENT (Dimensions I need to strengthen):

\_\_\_\_\_

MODULE 2 COMMITMENT (My identity type & one upgrade habit):

\_\_\_\_\_

MODULE 3 COMMITMENT (Money script I am rewriting & new belief):

\_\_\_\_\_

MODULE 4 COMMITMENT (Privacy actions I will complete this week):

\_\_\_\_\_

MODULE 5 COMMITMENT (Safety habits I will implement from the Master Checklist):

\_\_\_\_\_

My savings goal for the next 90 days: KSh \_\_\_\_\_

My security goal for the next 90 days: \_\_\_\_\_

One person I will share this workbook with: \_\_\_\_\_

I will review this plan on: \_\_\_\_\_

## Bonus 4: Self-Assessment Quiz — How Digitally Finance-Literate Are You?

Answer each question honestly. This quiz is for your own reflection — there are no wrong answers, only honest ones.

**Rate yourself from 1 (not at all) to 5 (very confident)**

1. I understand how the digital financial tools I use work, including their fees. \_\_\_\_/5
2. I have active security measures on all my financial accounts (2FA, strong passwords, SIM lock). \_\_\_\_/5
3. I know my rights as a digital finance consumer and how to report issues. \_\_\_\_/5
4. I am comfortable using a range of digital financial tools confidently. \_\_\_\_/5
5. I have healthy digital financial habits: I track spending, save regularly, and avoid impulse purchases. \_\_\_\_/5
6. I can spot digital fraud red flags and know what to do if I am targeted. \_\_\_\_/5
7. My digital financial decisions align with my long-term financial goals. \_\_\_\_/5
8. I actively support others in my community to become more digitally financially literate. \_\_\_\_/5

TOTAL SCORE: \_\_\_\_ / 40

32–40: Digital Finance Champion — Share your knowledge!

24–31: Strong Foundation — Focus on your weaker areas.

16–23: Growing — This workbook was exactly what you needed. Review and act.

8–15: Starting Point — Every journey begins here. You are already ahead by completing this.
